The one caveat is tires. What would you like to learn more about? You might need to consider upgrading your shock absorbers, brakes and suspension components to suit the upgrade or have adjustments made to driveshaft length or gear ratios.

Because your tires are heavier, they will also make your suspension work harder. Skid plates can easily be bolted on, and they add a massive amount of protection, don't impact your fuel economy or safety, and can be easily removed. Lifting the vehicle changes the geometry of the suspension components; this can put too much stress on other components, causing weak points to break. Local Off-Road Shops Many off-road shops host customer

appreciation trail events.

Robert Pepper is a motorcycling journalist, offroad driver trainer and photographer. The remaining 10 percent or so that was very difficult, and did require the aftermarket modifications our trucks were wearing. Search around to find a group that you will feel comfortable with; some offer a family-friendly environment, while others are more hardcore.
