‘Very few countries are pricing carbon high enough to meet climate targets’

Carbon pricing is the implementation of the polluter pays principle for greenhouse gases, usually in the form of either a carbon tax or a requirement to purchase.

Few countries are pricing carbon high enough to meet climate targets - OECD

Carbon pricing is an instrument that captures the external costs of greenhouse gas (GHG) emissions—the costs of emissions that the public pays for, such as.

As of , carbon pricing initiatives implemented or scheduled for implementation would cover 11 gigatons of carbon dioxide equivalent ($GtCO_2e$), or about.

Increasingly, companies across sectors and geographies are turning to an internal carbon price as one tool to help them reduce carbon emissions, mitigate .

We examine the opportunities and challenges associated with the major options for carbon pricing: carbon taxes, cap-and-trade, emission reduction credits.
