CROs provide a wide range of research and development services. They are much less costly than randomized trials, they can have huge study populations, and the results are more likely to represent practice Benson and Hartz, Cochrane Database Syst Rev.

Case-control studies are especially well-suited to studies of rare events, The Cochrane Collaboration was formed in Oxford, England, to systematically examine evidence for the full breadth of medical practice and quickly attracted an extensive international following. Passage of Medicare and Medicaid legislation, together with apparent advances in medical and surgical care, contributed to a surge in health care spending. For example, a researcher might study pain and disability levels as outcomes. Training New Practitioners Medical school, nursing school, and allied health school faculty require evidence of treatment effectiveness to determine how to train students. Many disease-specific instruments are also available.
